Understanding secondary ice production in deep convective clouds

Background

- Bowen Zhu
- Department of Earth and Environmental Sciences, University of Manchester
- bowen.zhu@manchester.ac.uk

What am I curious about?

- Which SIP mechanisms actually matter

Research interests

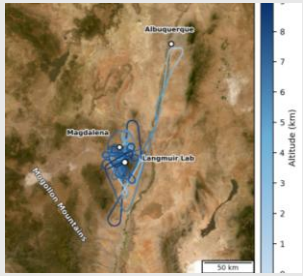
- Microphysics in real clouds
- Parcel and bin microphysics modelling
- In-situ aircraft observations

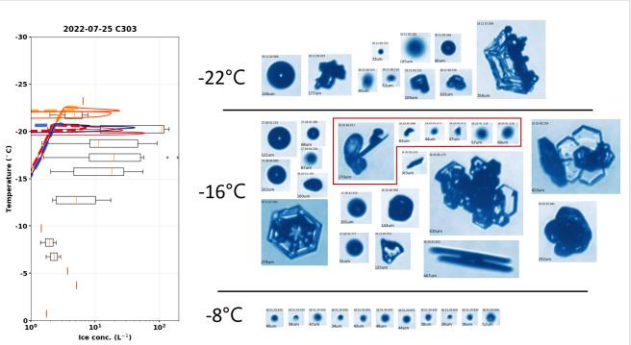
What's something I'd like to work on in the future?

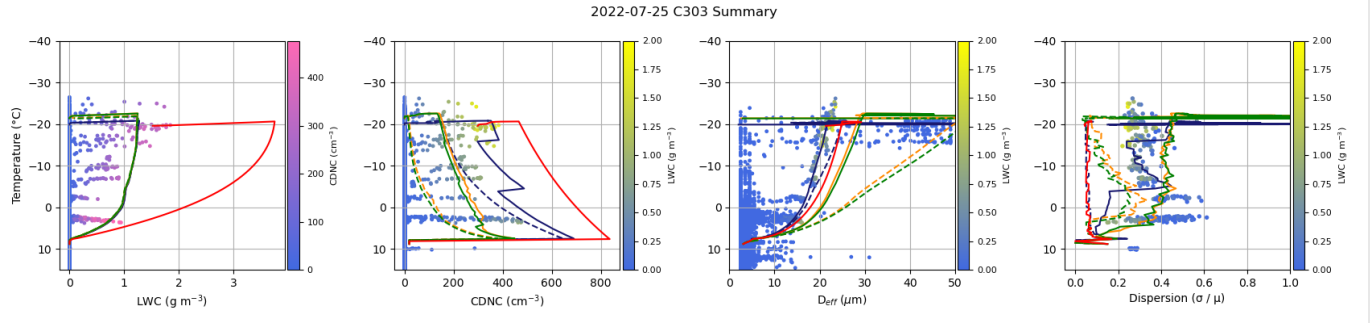
- Weather modification

What I'm working on

Deep Convective Microphysics Experiment (DCMEX)







- Figure 1. Vertical profiles of (from left to right): cloud droplet number concentration (CDNC), liquid water content (LWC), effective diameter (Deff), and dispersion for case 20-07-2022
