Development of graupel in deep convective cloud

Ezri Alkilani-Brown[(1)], Alan Blyth[(1,2)], Declan Finney[(1,2)], Chetan Deva[(1)], Paul Field[(1,3)], Jonathan Crosier[(4)] and Ben Murray[(1)]

(1)University of Leeds (2)National Centre for Atmospheric Science, UK (3)Met Office, UK (4)University of Manchester

Graupel in the UM (CASIM) has **not** been evaluated with *in-situ* data

Ice microphysics interests:

- Evolution & growth pathways of graupel in cumulonimbus
- Secondary ice
- *In-situ* images of ice particles
- ML automatic classification of ice images
- Bulk microphysics schemes
- INP

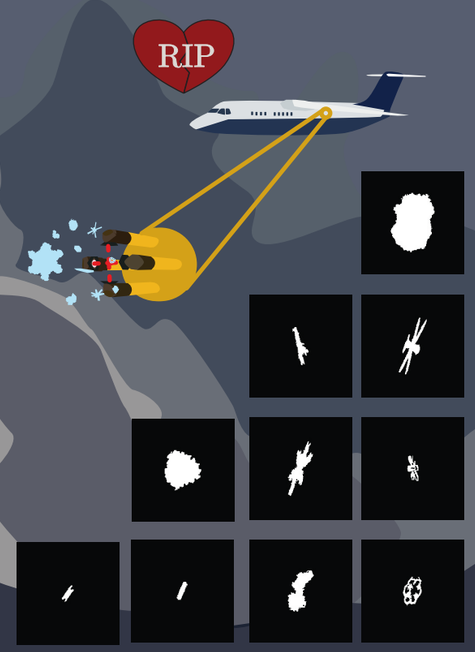
General interests:

In-situ observations

Radar (remote sensing) & *in-situ* & modelling intercomparison

Other interests

- How to pivot *in-situ* observations without FAAM? - drones?
- Ice microphysics implications on anvil development?
- Lagrangian Particle-Based Microphysics
- Outreach!



2D-S & HVPS images
