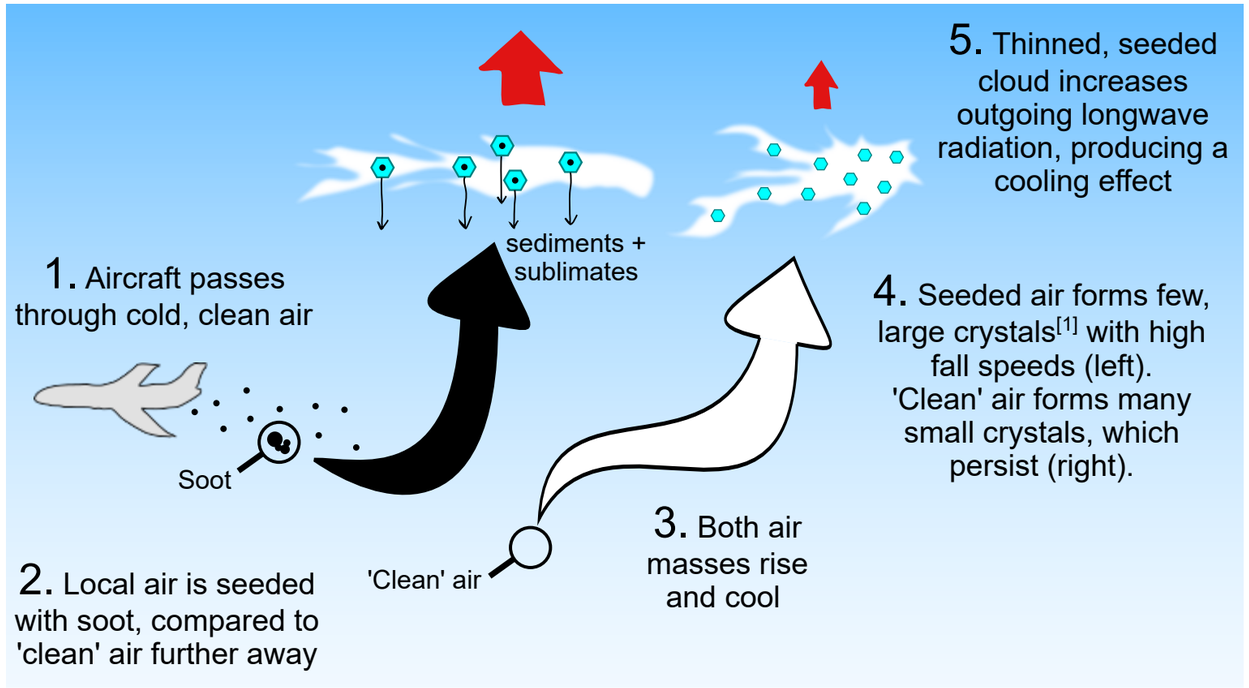
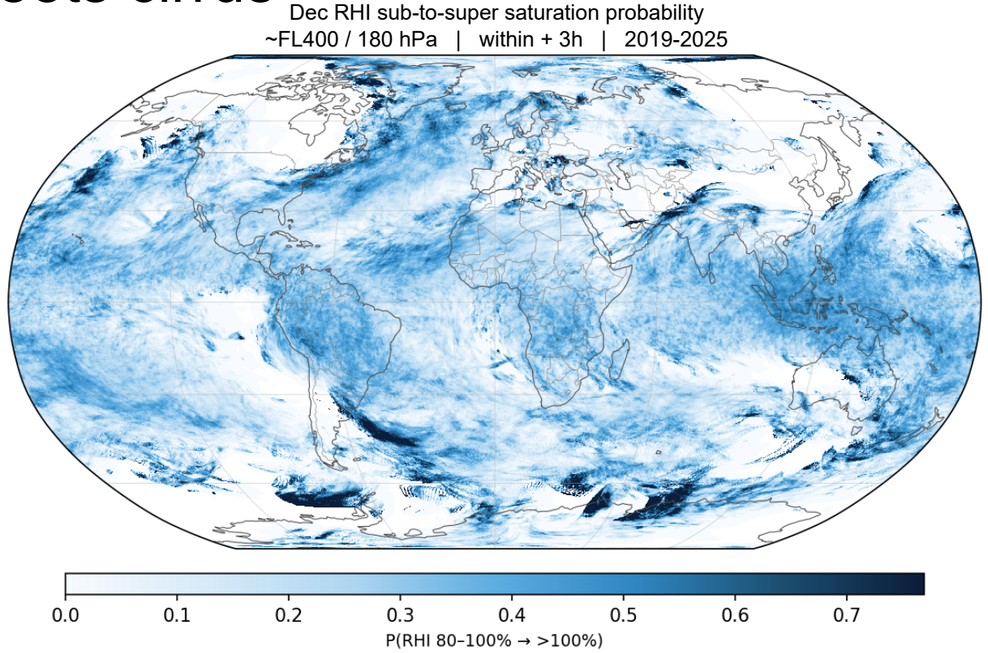
Do planes change how cirrus clouds trap heat?

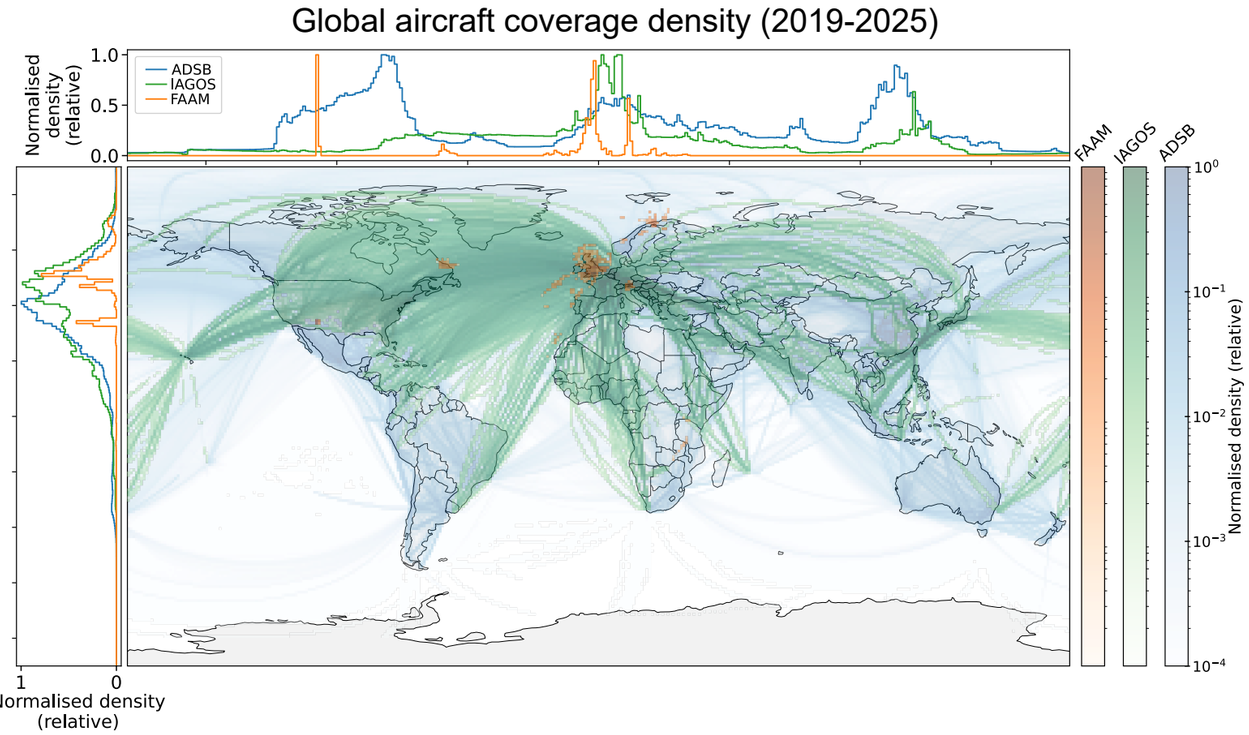
Gavin Leong[a], Sebastian Eastham[a], Edward Gryspeerdt[b], Marc Stettler[c]



...meets cirrus



Where soot...



"I wish I knew somebody else who wants to work on…"
…the observational side of cirrus cloud modification. I think there's a gap: most people working on climate intervention are either pure modellers or they're in the solar geoengineering space.

"I think everyone is wrong about…"
…the idea that running more climate models will solve whether cirrus cloud modification is viable. A decade of contradictory climate models on cirrus modification proves the answer isn't more simulations, it's cloud-watching!
