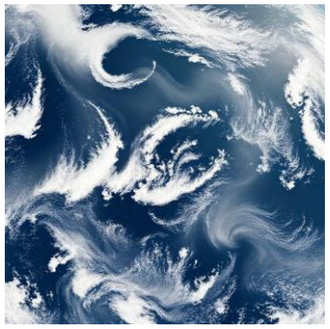
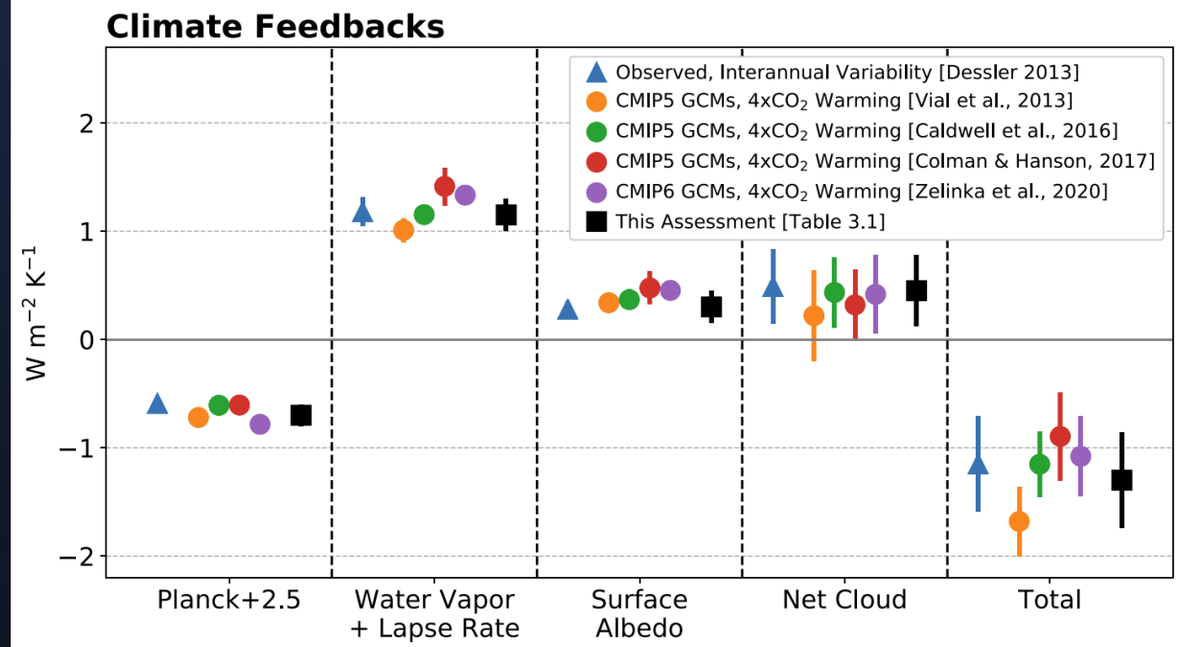
Interested in deep convection



If I don't have to think about funding, I'd generate ensembles of storm-resolving simulations for both the current climate and PGW scenarios, to investigate how high clouds within MCSs respond to a warmer world.

In my spare time, I'd head out on hikes with friends and enjoy being outdoors. I also write about weather and climate science for the public, sharing complex ideas in an accessible way.

Cloud feedback is still very uncertain!



Sherwood et al., 2020

Longer/bigger storms produce more negative CRE
